

# Project Profile

Historical Home  
Brookville, New York

**Skimflow LP®**  
**Keedelath™**

Brookville, NY has a rich history, even back in the 1980's they "fought hard to preserve the best, to adjust to the future without sacrificing the past" (Rawlinson). Now, in the 21st century, a contractor is working on restoring a 1,000 square-foot historical home.

Since this home is over 200 years old, it had 2 inches of wood substrate that was defective. The workers decided to use **Keedelath™ HC (Honey Comb)** with an inch and a half to 2 inches of Self Leveling Dependable **Skimflow® LP**.

The installation crew used honeycomb because it is easy to work with and they can save time on their project. The renovation crew decided to use **Skimflow® LP** because it is a high quality and affordable product for their flooring underlayment. The product's self-leveling characteristics works well with the home and the radiant heating system. **Skimflow® LP** is also suitable for installation over a wide variety of substrates across the home.

Furthermore, **Keedelath™ HC** is a self-furring synthetic lath that is easier to install and lighter than metal lath. This product can be applied with self-levelers while being flexible, strong, non-corroding, and lightweight.

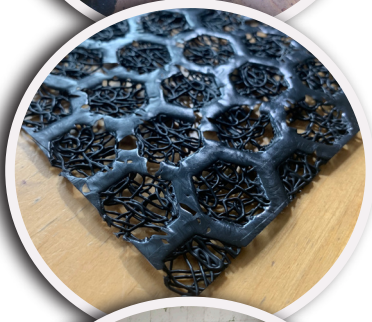

**Skimflow® LP** is designed to address unlevelled or old damaged floors in residential, commercial, and institutional environments. **Skimflow® LP** is compatible and suitable with a wide variety of finished flooring options and heating systems.

With the combination of Dependable's products: **Keedelath™ HC** and **Skimflow® LP**, the floors are properly prepared and ready for the final floor covering installation.
