

FloorPrep.com's

Fire-Rated, Multifamily Self-Leveling Underlayments

Multi-Family wood construction relies on UL fire-rated assemblies to meet fire resistance requirements. Extensive testing of FloorPrep.com's Skimflow Underlayments (NP & LCB) ensure that these products meet the required UL classification and the repaired assembly remains code compliant.

Owners, Specifiers, Designers, and Contractors may now repair damaged gypsum subfloors in fire-rated assemblies and be assured the repaired assembly remains code compliant. A manufacturer of sound attenuation systems and fire-rated gypsum underlayments – FloorPrep is well positioned to provide innovative solutions for your new Multi-Family construction and/or repair or renovation.

Self-Leveling Underlayment SKIMFLOW Products

Our goal is to offer robust products with exceptional volume stability, surface finish, and flowability.

We are expanding the goal posts for contractors by offering non-shrinking technology for any application, and self-drying products where necessary.

Skimflow® NP

Premium Hybrid Gypsum Self-Leveling Underlayment

Skimflow NP (No Problem) was engineered to solve any leveling project. NP offers the flowability to handle thin commercial applications over concrete, and the stability for thick pours over wood.

Skimflow NP is designed with no-shrink hybrid technology to ensure durable underlayments that exhibit class leading volume stability for life, facilitating a pristine finish on every floor. No profile required, guaranteeing a superior installation and outcome - no problem.

Skimflow® LCB

Fiber Reinforced Self-Leveling Underlayment

Skimflow LCB (Liquid Cement Board) is a fiber reinforced product designed specifically for use over wood. LCB was engineered with tremendous flexural strength to handle any subfloor movements to ensure a durable bond, and a lasting subfloor. With LCB, no additional mesh is required. Mix, place, dry – and your wood subfloor is fortified and strengthened for any finished floor material.

Skimflow underlayments offer complete compatibility with existing gypsum substrates, superior flow and accelerated dry times to ensure rapid renovation of occupied spaces.

Maintaining an existing Fire-rated assembly, installing radiant heat, or addressing a compromised substrate. Skimflow Underlayments make contractors look their best, and preserve value for building owners.
