

PROJECT PROFILE

Restaurant Refresh | Pittsburgh, PA

Supplying Speed Without Sacrificing Quality & Service for Restoration of Pittsburgh-Based Thai Noodle Restaurant

In the high-octane world of big-city dining, owning a restaurant is less a job and more a relentless race against the clock. In a business where the margins are razor-thin and the competition is always turning up the heat, speed and precision aren't just preferred when it comes to restoration and repairs—they're non-negotiable.

This held true for the owners of Noodlehead in Pittsburgh. The casual Thai noodle joint decided to repair and resurface the floor of their dining space to improve the overall dining experience for their customers. Knowing that each day the restaurant remained closed for renovations meant an entire day without earnings, time was of the essence. The project called for a solution that supplied speed without sacrificing quality and service. The contractors turned to FloorPrep's **Skimflow® LCB Rapid** over **PrepPro® SLV**.

Designed for fast-track interior installations, Skimflow® LCB Rapid is a fiber-reinforced, pumpable, self-leveling material features accelerated drying to facilitate foot traffic as quickly as 90 minutes and floor covering installations the next day. With superior density, exceptional durability, and resistance to wheel tracking, Skimflow® LCB Rapid ensures a smooth, strong foundation for a variety of floor finishes.

PrepPro® SLV is a very low viscosity, water-based surface strengthening epoxy primer. For this project, it was utilized to treat hairline cracking on the exposed subfloor.

FloorPrep has the product solutions to quickly repair your gypsum subfloor and put your space (whether commercial or living) back in service!

- 1 Concrete Substrate
- 2 PrepPro® SLV
- 3 Skimflow® LCB Rapid
